

Environmental & Sustainability Policy – Manor Wildlife Park

Manor Wildlife Park's mission is: '*Securing populations of species in natural habitats for the long term*'. Though a limited company, the park is dedicated to creating a more biodiverse planet for our future generations. We hope to achieve this goal through environmental education, endangered species breeding and conservation. We understand the impact we have on the environment and are striving to reduce our carbon footprint with environmental consideration underlying every operational decision we make.

Manor Wildlife Park is committed to:

- Complying to all relevant environmental regulation, legislation and industry codes and where no legislation exists, we will strive to set standards that meet our aim of improved environmental performance.
- Reducing emissions from energy and transport, and where practicable and economically viable using renewable rather than non-renewable resources.
- Managing waste in line with our zero to landfill policy.
- Continued reviews and improvement of our sustainable procurement practices.
- Enhancing biodiversity around the park.
- Informing and educating visitors and the general public on issues relating to conservation, environmental protection and sustainability.
- Work towards ISO 14001 certification.

This policy will be reviewed annually and will be available to view on the park's website, www.manorwildlifepark.co.uk. It will also be shared internally via email and be present on all staff notice boards.
